## Experience

**Mobile and Frontend Engineering Lead** Belo  
Feb 2022 - Today Buenos Aires - Argentina

As the Mobile Engineering Lead at Belo, I am responsible for overseeing the frontend and mobile areas of the company. I led the challenging task of migrating the company's native application from Flutter to React Native, successfully completing the project within a tight deadline of 5 months, starting from scratch. My primary skills include TypeScript, React, React Native, MobX, Redux, and Tailwind.

**Frontend developer** Navent  
May 2021 - Jan 2022 Buenos Aires - Argentina

As a frontend developer at Navent Group, I played a key role in supporting a diverse network of real estate websites including Zonaprop, Imovelweb, Wimoveis, Inmuebles24, Adondevivir, Plusvalia, and Conlallave. My primary technology of choice was React, which I used to maintain and enhance the user experience across these websites. I gained valuable experience in collaborative teamwork and agile methodologies, managing large codebases and handling high levels of user traffic.

**Frontend developer** Aconpy  
Feb 2021 - May 2021 Buenos Aires - Argentina

As a frontend developer at my first job, I took on the challenging task of coding the web and a virtual wallet project called "Paiddly," with React as my primary technology. My role included taking full ownership of the project, from development to design decisions, as I was the only frontend developer in the company. I gained valuable experience in decision-making and taking on responsibilities beyond just coding.

## Projects

### Github

<https://github.com/Pakvothe>

This is the link to where you can find my projects.

### Belo app

I have led the frontend and mobile development efforts at Belo, a successful crypto wallet project aimed at making financial management more accessible to the masses. With a user base of over 700k and availability on both Android and iOS platforms, Belo has become a widely-used and highly successful financial tool. My primary responsibilities have included developing the application using React Native, implementing MobX for state management, integrating Axios for data fetching, and leveraging Jest for testing. Throughout my work on Belo, I have gained valuable experience in optimizing code and utilizing device resources, enabling the application to deliver a smooth and seamless user experience.

## Skills

My top skills include extensive knowledge and experience with TypeScript, React, and React Native. I also possess expertise in state management frameworks such as MobX and Redux, and have experience implementing responsive UIs with the help of Tailwind CSS. These skills have enabled me to create highly functional, efficient, and visually appealing applications that have received positive feedback from users and colleagues alike. I am always eager to learn and expand my skill set to tackle new challenges and deliver the best results for any project or organization.
