SUMMARY

Engineering lead turned technical PM. Four years leading belo's frontend and mobile teams (3.5M+ users): led the Flutter to React Native rewrite in five months, built the team through hiring and performance reviews, owned mobile architecture. Since 2026 I run product for cross-border payments, which means I bring the business context into architecture decisions and still run planning for squads without a tech lead.

EXPERIENCE

Technical Product Manager, belo

Feb 2026 - Present

Run product for the cross-border payments squad, still hands-on with architecture and data.

- Took a new-country payment integration from kickoff to internal release in 11 days, with account opening in about 4 seconds.
- Run planning and architecture decisions for a squad without a tech lead.
- Turned a one-off regulatory requirement into a reusable localization capability, in production the same day.
- Caught a revenue metric off by 96% (wrong source table), found the right source and documented it company-wide.
- Found a ~50% drop in the take rate of a payment rail with six-figure monthly revenue that nobody had flagged; the analysis triggered the pricing review.
- Stopped a four-year analytics contract priced at twice the incumbent tool; led the evaluation of alternatives with six-figure annual savings.
- My OKR format was adopted by the CPO as the standard for every squad.

Frontend & Mobile Lead, belo

Feb 2022 - Feb 2026

- Led the rewrite of the belo app from Flutter to React Native: 3.5M users, five months.
- Built and managed the frontend and mobile teams: hiring, 1:1s, performance reviews, mentoring.
- Owned mobile architecture and performance on iOS and Android for a regulated fintech operating in several countries.
- Owned the full release pipeline with Expo and EAS: builds, provisioning and submissions to the App Store and Google Play.
- Turned Figma designs into production components with smooth animations (Reanimated, Gesture Handler).
- Shipped the web side too: SEO, the BeloPay transaction web app and an internal compliance dashboard.

Founder, i1n (side project)

Feb 2026 - Present

- Localization infrastructure for React and React Native stacks that decouples translation management from deploy cycles. Product, backend, frontend, CLI and npm package.

Frontend Developer, Navent

May 2021 - Jan 2022

- Zonaprop and Imovelweb, high-traffic real estate platforms built with React.

Frontend Developer, Aconpy

Feb 2021 - May 2021

- Sole frontend developer of Paiddly, a virtual wallet, from first commit to deployment.

SKILLS

Engineering: React Native, Expo, EAS, TypeScript, React, Reanimated, Mobile Architecture, App Store & Google Play releases, Jest, CI/CD, AI agents (Claude Code)

Management: Engineering Management, Hiring, Performance Reviews, Planning, Technical Roadmaps

Product & data: Product Management, OKRs, Payments, SQL, BigQuery

EDUCATION & LANGUAGES

Henry Full Stack Bootcamp, Oct 2020 - Jan 2021 · **Languages:** Spanish (native), English (professional working proficiency)
